

SAURABH CHAVAN

SOFTWARE ENGINEER

+1 (248) 947-7171 • SAURABHCHAVAN2303@GMAIL.COM • CANTON, MI 48187 • LINKEDIN

PROFESSIONAL SUMMARY

Software Engineer with 5+ years of experience building cloud-native, distributed systems using Python, Go, and JavaScript. Specialized in AWS, Kubernetes, Infrastructure as Code (Terraform), and CI/CD automation for scalable, high-availability applications. Experienced in integrating AI/ML solutions, including large language models and generative AI tools, into web applications and enterprise workflows. Proven track record of improving system performance, reducing infrastructure costs, and delivering resilient microservices architectures. Strong expertise in DevSecOps, system design, performance tuning, and Agile methodologies.

CORE COMPETENCIES

Programming Languages: Python, Go, Java, JavaScript, TypeScript, SQL, Bash, C#
Cloud Platforms: AWS (EC2, S3, Lambda), Microsoft Azure, Google Cloud Platform
DevOps & Infrastructure: Docker, Kubernetes, Terraform (Infrastructure as Code), Ansible, Jenkins, GitHub Actions, CI/CD Pipelines
Frameworks: React, Angular, Node.js, Express.js, Spring Boot, Flask, Django, .NET Core
Databases & Caching: PostgreSQL, MySQL, MongoDB, Redis, Oracle
Testing & Quality: PyTest, JUnit, Selenium, Postman, SonarQube
Architecture & Design: Microservices, REST APIs, GraphQL, Event-Driven Architecture, Distributed Systems, System Design, API Gateway
Monitoring & Observability: Prometheus, Grafana, ELK Stack
Security & Practices: Cloud Security, DevSecOps, Performance Tuning, Scalability, High Availability, Agile/Scrum
AI/ML Integration: Large Language Models, LangChain, OpenAI API, GitHub Copilot, Generative AI, AI-driven document summarization, AI-powered code generation

PROFESSIONAL EXPERIENCE

INSIGHT ENTERPRISES | SOFTWARE ENGINEER

JUL 2025 – PRESENT

- Integrated large language models (LLMs) using LangChain and OpenAI API into enterprise web applications to provide document summarization, knowledge extraction, and advanced Q&A features, reducing manual processing effort by 40% and accelerating decision-making for business teams.
- Designed and deployed high-performance REST APIs for AI/ML services, handling 100K+ daily requests with low latency and high concurrency.
- Developed Go and Python microservices orchestrated via Kubernetes and Docker, enhancing system scalability by 50% and improving reliability by 40% for critical enterprise applications.
- Accelerated development by 25% by automating code generation and refactoring workflows using AI-assisted engineering tools.
- Implemented monitoring and anomaly detection using Prometheus metrics and Grafana dashboards to proactively identify performance issues and prevent system downtime.
- Applied DevSecOps practices to pipelines, including automated code quality checks, model version control, and secure deployment, strengthening compliance with enterprise security standards.
- Optimized PostgreSQL queries and load balancing strategies, achieving sub-200ms response times and ensuring 99.9% system uptime.
- Led system design and scalability planning for distributed services, aligning architecture with long-term growth and reducing cloud infrastructure costs.
- Engineered cloud-native infrastructure on AWS using Terraform and Kubernetes, improving deployment efficiency by 30% and reducing infrastructure costs through resource optimization.
- Built and optimized backend services for high-throughput cloud applications, handling 120K+ daily requests with consistent sub-150ms latency and improved system reliability.

TECH MAHINDRA | FULL STACK DEVELOPER

SEP 2020 – OCT 2022

- Built AI-enabled web applications integrating generative features for content generation, summarization, and interactive chat, improving user engagement by 30% and reducing manual effort across workflows.
- Designed and developed backend services in Node.js and Python handling 80K+ daily requests with optimized latency (<250ms) and 99.8% availability.

- Developed CI/CD pipelines in Jenkins and GitHub Actions, reducing deployment time by 40% and improving release reliability with zero-downtime deployments.
- Enhanced frontend UI/UX using React and Angular frameworks to present data-driven insights and dashboards, improving user adoption by 35%.
- Implemented caching strategies with Redis and MongoDB, achieving a 40% increase in efficiency for high-traffic endpoints and reducing API response time by 30%.
- Improved development efficiency by leveraging AI-assisted coding tools, reducing overall development cycle time by 20%.
- Applied event-driven architecture patterns to process large datasets asynchronously, improving system throughput by 30% and reducing processing delays.
- Conducted end-to-end validation, monitoring, and performance evaluation in production, reducing error rates by 15% and improving system stability.

MPHASIS | BACKEND DEVELOPER

JUL 2018 – AUG 2020

- Developed scalable REST APIs using Python and Flask for financial systems serving 50K+ daily users, increasing transaction throughput by 42%.
- Automated Azure infrastructure provisioning using Ansible and Infrastructure as Code practices, reducing downtime by 18% and accelerating environment setup by 35%.
- Integrated CI/CD pipelines with CircleCI and GitLab, improving deployment efficiency by 25% and eliminating manual configuration errors.
- Designed modular backend services following system design and OOP principles, reducing technical debt and improving maintainability.
- Built automated unit and integration testing frameworks using PyTest and JUnit, achieving 95% code coverage and reducing production defects by 30%.
- Optimized MySQL queries and indexing strategies, improving reporting performance by 33% for internal analytics teams.
- Strengthened authentication and authorization mechanisms using .NET Core, enhancing compliance with enterprise security standards.
- Implemented centralized logging using ELK stack, improving debugging efficiency and system observability.

MINDTREE | FRONTEND INTERN

JAN 2018 – JUN 2018

- Developed reusable UI components using JavaScript and jQuery, reducing code redundancy by 20% and accelerating feature releases.
- Assisted in building internal automation tools using Django and Spring Boot, reducing manual processing efforts.
- Optimized frontend performance through code refactoring and query tuning, reducing page load time by 25%.
- Delivered assigned sprint tasks with 100% completion rate in Agile environments.

EDUCATION

Lawrence Technological University – Southfield, MI | Master of Science, Artificial Intelligence | 3.82/4.0 | May 2025

Savitribai Phule Pune University – India | Bachelor of Engineering, Electronics & Telecommunication | May 2018

PUBLICATION

From Detection to Decision: Transforming Cybersecurity with Deep Learning and Visual Analytics — AI, 2025.
