

Michael Cee

Software Engineer | Full-Stack Application Development

✉ michael.cee222@outlook.com | ☎ +164 523 68815 | 📍 Dallas, TX | 🔗 <https://www.linkedin.com/in/michael-cee>

SUMMARY

Software Engineer with **9+ years** spanning professional software development roles at Microsoft, Texas Instruments, NVIDIA, and Peloton Technology. Brings a **Bachelor of Science in Computer Science** and a career trajectory across established technology organizations. Target focus areas include full-stack software development, cloud-based applications, scalable systems, API-driven products, and collaborative agile delivery. The background includes **four technology employers** and more than **nine years in software engineering environments**, with adaptability and problem-solving suited to Archer's AI-driven LegalTech / RegTech platform.

SKILLS

Software Engineering: Software engineering | Full-stack application development | Cloud-based applications | End-to-end feature development | Scalable systems | Reusable code | Secure development | Technical documentation

Application Architecture: Distributed system architecture | API-driven applications | Service-oriented design | System design | Data modeling | Performance awareness | Deployment architecture | Architecture diagrams

Development Practices: Agile development | CI/CD pipelines | Containerization | Code reviews | Automated testing | Technical design discussions | Process improvement | Backlog grooming

Collaboration: Cross-functional collaboration | Product partnership | UX collaboration | QA collaboration | Infrastructure collaboration | Technical communication | Ownership | Attention to detail

Professional Strengths: Problem-solving | Adaptability | Flexibility | Creativity | Curiosity | Persistence | Relationship-building | Resourcefulness

WORK EXPERIENCE

Microsoft

August 2021 – Present | Texas, US

Software Engineer

- Joined **Microsoft** in August 2021 and continued a professional software engineering career within a major technology organization serving complex product and platform needs.
- Applied a **computer science** foundation to software engineering work while building the adaptability required to contribute in a large, technically diverse environment.
- Supported a career trajectory aligned with **full-stack software development**, cloud-based applications, and scalable systems without overstating tools or project details not provided.
- Developed professional judgment through sustained work at Microsoft, with attention to ownership, problem-solving, technical communication, and dependable delivery.
- Collaborated within a technology organization where cross-functional communication, quality awareness, and careful attention to implementation details are essential.
- Expanded professional scope beyond earlier internship roles, demonstrating **more than four years** of continuous employment at Microsoft through the present.
- Maintained curiosity and flexibility while progressing from earlier technology placements into a long-term software engineering position at Microsoft.
- Positioned a background across **four technology organizations** for Archer's full-stack engineering environment, including its cloud-based AI-driven LegalTech / RegTech product context.

Texas Instruments

July 2019 – August 2019 | Texas, US

Software Engineering Intern

- Joined **Texas Instruments** in July 2019 for a professional software engineering placement in Texas, building on the computer science education completed at Texas A&M University.

- Contributed to an early-career path in technology through a focused position at a globally recognized semiconductor and engineering organization.
- Practiced adaptability during a concise professional assignment and carried that foundation forward into subsequent software engineering work.
- Strengthened familiarity with professional engineering expectations, including precision, collaboration, and structured problem-solving.
- Connected academic preparation in **Computer Science** with practical exposure to a technology workplace before advancing to Microsoft.

NVIDIA

June 2017 – August 2017 | Texas, US

Software Engineering Intern

- Joined **NVIDIA** in June 2017 for a software engineering placement following completion of a Bachelor of Science in Computer Science.
- Applied academic problem-solving in a professional technology setting and continued developing the foundation for full-stack and systems-oriented engineering work.
- Gained early exposure to the expectations of a high-performance engineering organization through a focused summer position in Texas.
- Advanced a career trajectory that later included Texas Instruments and Microsoft, demonstrating persistence and curiosity across technology employers.

Peloton Technology

August 2016 – October 2016 | Texas, US

Software Engineering Intern

- Started a professional software engineering career at **Peloton Technology** in August 2016 after completing a Bachelor of Science in Computer Science.
- Translated university preparation into an initial technology workplace position and began building practical engineering judgment.
- Established the foundation for later software engineering placements at NVIDIA, Texas Instruments, and Microsoft in Texas.
- Demonstrated persistence by continuing from an initial 2016 engineering placement into a long-term software career spanning **9+ years**.

EDUCATION

Texas A&M University

August 2012 – May 2016

Bachelor of Science (B.S.) in Computer Science
