

Steven Mattingly

Full Stack Software Engineer (Remote)

stevenmattingly820@outlook.com | 5405965552 | New Castle, IN | [linkedin.com/in/stevenm-3a11043a0](https://www.linkedin.com/in/stevenm-3a11043a0)

PROFESSIONAL SUMMARY

Full Stack Software Engineer with 10+ years of software-engineering experience delivering user-facing products and production workflows across the application stack. Skilled in JavaScript, Node.js, Vue, React, PostgreSQL, and AI-powered applications, with a product mindset focused on ownership from idea through production. Brings hands-on capability in customer collaboration, platform extension, UI/UX delivery, clean code, and tested, maintainable systems. Integrated an AI chatbot into application workflows and shipped software designed to reach production within days while supporting enterprise-oriented use cases.

CORE SKILLS

- Full-Stack Development: JavaScript, Node.js, Vue, React, TypeScript, HTML5, CSS3, REST APIs, Full-stack application development, Responsive UI/UX
- AI and Application Intelligence: AI-powered applications, Large Language Models (LLMs), AI chatbot integration, Prompt-driven workflows, Conversational interfaces, AI application integration, Production AI workflows, Research-to-production collaboration, Enterprise AI use cases, Workflow automation
- Backend and Data: PostgreSQL, SQL, API design, Server-side development, Data modeling, Database integration, Authentication workflows, Asynchronous processing, Application architecture, Performance optimization
- Engineering Quality and Delivery: Clean code, Tested code, Maintainable code, Unit testing, Integration testing, Debugging, Code review, Continuous Integration/Continuous Delivery (CI/CD), Version control, Production release management
- Product and Customer Collaboration: Product mindset, Customer collaboration, Enterprise customer engagement, Requirements discovery, Solution tailoring, Feature ownership, End-to-end delivery, Cross-functional collaboration, Technical communication, Stakeholder alignment
- Professional Strengths: Ownership mentality, Problem-solving, Adaptability, Flexibility, Creativity, Curiosity, Persistence, Resourcefulness, Relationship-building, Emotional intelligence

EMPLOYMENT HISTORY

Senior Software Engineer

Improving

July 2021 - Present

Austin, Texas

- Built full-stack workflows with JavaScript, Node.js, Vue, React, and PostgreSQL, taking features from concept through production and shortening delivery cycles to within days.
- Integrated an AI chatbot into user-facing application workflows, connecting conversational interactions with backend services so users could complete tasks through a more natural interface.
- Delivered AI-powered application capabilities for product and enterprise stakeholders, translating customer needs into maintainable software and supporting real-world production use.
- Extended platform and UI/UX layers with reusable components and service integrations, improving consistency across workflows while preserving clean, tested, and maintainable code.
- Partnered with product, platform, and research teams to shape requirements, evaluate implementation options, and move ownership-driven features from idea to production.
- Hardened application quality through unit testing, integration testing, code review, and disciplined release practices, reducing avoidable regressions across customer-facing workflows throughout delivery.

Senior Software Engineer

Microsoft

September 2019 - June 2021

Remote

- Architected end-to-end software features across JavaScript, Node.js, React, and PostgreSQL, balancing customer needs with maintainable application and service design.

- Implemented tested backend services and frontend workflows, using REST APIs and structured validation to support reliable user-facing product behavior in production.
- Connected UI components to Node.js services and PostgreSQL data stores, resolving integration gaps while keeping workflows understandable for product and enterprise stakeholders.
- Refined application interactions through thoughtful UI/UX changes, incorporating feedback from cross-functional partners and making complex workflows easier to navigate.
- Coordinated with engineering and product teams on requirements, technical tradeoffs, and delivery sequencing, reinforcing ownership from initial idea through release.
- Automated repeatable development and release checks with version control and Continuous Integration/Continuous Delivery (CI/CD), improving consistency across the software lifecycle routinely.

Software Engineer

August 2015 - August 2019

Dataiku

Remote

- Developed maintainable software components for data-oriented workflows, combining JavaScript, backend services, and PostgreSQL to support practical product functionality.
- Created user-facing interfaces and service integrations that connected workflow actions with persistent data, emphasizing clarity, reliability, and straightforward maintenance.
- Streamlined feature delivery by clarifying requirements with product and technical partners, then translating those needs into tested implementation and production-ready changes.
- Validated application behavior through unit and integration testing, investigating defects methodically and strengthening confidence in releases across collaborative engineering work.
- Documented implementation decisions and workflow behavior, helping teammates and stakeholders understand system boundaries, expected outcomes, and future extension points.

Software Engineer

June 2013 - July 2015

Clarifai

San Francisco

- Prototyped software workflows that connected application interfaces with backend services, using JavaScript and API-oriented design to turn product ideas into usable features.
- Orchestrated service and data interactions across application components, keeping implementation focused on clear ownership, dependable behavior, and practical user outcomes.
- Tested feature paths and integration points systematically, identifying defects early and supporting cleaner releases through disciplined debugging and collaborative review.
- Diagnosed workflow issues by tracing frontend, backend, and data behavior together, then applied targeted fixes that improved maintainability and supported continued product development.
- Modernized implementation patterns as requirements evolved, applying adaptability and problem-solving to help software remain useful, understandable, and ready for future extension.

EDUCATION

Master of Science (M.S.) in Computer Science

April 2009 - May 2013

Indiana State University
